

### Practical-14: Design an Animated Navigation Bar.

**Definition:** Design a navigation bar with animation, ensuring each icon or element can be updated consistently across all screens.

### Solution:

### Working:

- First, open Figma. Add a new Figma design file.
- Rename a file as 210\_Practical-14\_NavigationBar.
- In this design, the following tools are used for a particular operation:

| Tools Name       | Use                                                     | Properties                                                  |
|------------------|---------------------------------------------------------|-------------------------------------------------------------|
| Android Medium-1 | The Android Medium-1 is used as a Frame for this design | Width: 589 px<br>Height: 786px<br>Color fill: # 005642,100% |

|                  |                                                                                              |                                                                                                                                                                                                                                                                                                                       |
|------------------|----------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  |                                                                                              | Corner radius: 0PX<br>Blend mode: pass through                                                                                                                                                                                                                                                                        |
| <b>Rectangle</b> | Used to create Navigation-Bar.<br>Uploaded icons using Iconify Plugin.<br>Applied prototype. | Width: 359px<br>Height: 60px<br>Corner radius: 50px<br>Color fill: # D9D9D9<br>Opacity: 100%<br>Trigger: On Click<br>Action: Change To<br>Navigation Bar: Home, Search, Delete, Profile & Percentage                                                                                                                  |
| <b>Ellippse</b>  | Used to design Loading Buttons.<br>Applied prototype.                                        | Width: 97px<br>Height: 328px<br>Opacity: 100%<br>Corner Radius: 50<br>Color: # 8A38F5 100%<br>Effects: Inner Shadow: Blur-30, Color-3412F3, Spread-20<br>Trigger: After delay<br>Delay: 1ms<br>Action: Change To<br>Loading button: 25, 50, 75 & 100%<br>Animation: Smart animate<br>Curve: Linear<br>Duration: 500ms |
| <b>Rectangle</b> | Used to design Submit Button.<br>Applied Prototype.                                          | Width: 227px<br>Height: 276px<br>Opacity: 100%<br>Corner Radius: 5<br>Ratio: 71%<br>Color: # 8A38F5<br>Trigger: While hovering<br>Action: Change To<br>Submit Button: Hover<br>Animation: Smart animate<br>Curve: Linear                                                                                              |

|                  |                                                                    |                                                                                                                                                                                                                             |
|------------------|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                  |                                                                    | Duration: 200ms                                                                                                                                                                                                             |
| <b>Rectangle</b> | Used to design Check Boxes.<br>Applied Prototype.                  | Width: 88px<br>Height: 126px<br>Opacity: 100%<br>Corner radius: 5<br>Color1: # D9D9D9<br>Color2: # 580C0C<br>Trigger: On Click<br>Action: Change to<br>Check Box: Female<br>Animation: Smart animate<br>Duration: 200ms     |
| <b>Ellipse</b>   | Used to design Radio Button.<br>Applied Prototype.                 | Width: 80px<br>Height: 134px<br>Opacity: 100%<br>Corner Radius: 5<br>Color1: # 8A38F5<br>Color2: # D9D9D9<br>Trigger: On click<br>Action: Change to<br>Radio button: Checked<br>Animation: Smart animate<br>Duration: 200ms |
| <b>Rectangle</b> | Text-Boxes in it.                                                  | Width1: 26px<br>Height1: 23px<br>Width2: 114.96<br>Height2: 21<br>Width3: 45<br>Height3: 19<br>Opacity: 100%<br>Corner Radius: 0                                                                                            |
| <b>Icons</b>     | Used to show symbols of Home, Search, Percentage, Trash & Profile. | Width: 18<br>Height: 18<br>Opacity: 100%<br>Corner Radius: 0                                                                                                                                                                |
